

SAP People Connect 365

Stay Up and Running – Even During Disruption

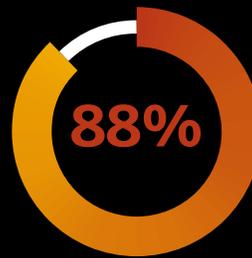

Global threats. Natural disasters. Cyberattacks. Disruption can happen anytime, anywhere. When the unexpected happens, you need to be prepared. But many companies lack the technology to monitor fast-moving regional events, connect with employees around the world, and maintain operational efficiency during a crisis. Why?

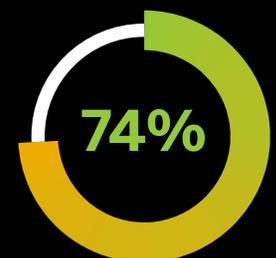

of organizations have multiple locations

have to rely on at least three communication methods during a crisis

don't permit relocating to third-party locations

prohibit working from home

However, companies recognize the possibility of being targeted by a threat.

75%
deploy anti-virus software

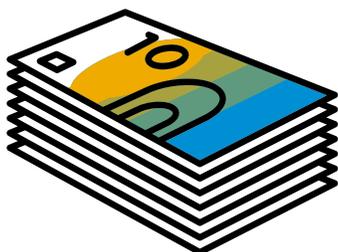

69%
use monitoring applications on their networks

57%
insure against losses arising from supply chain incidents

And the cost of unplanned disruptions is high.

13%

have experienced cumulative losses of at least \$294,000 due to a cyber incident

34%

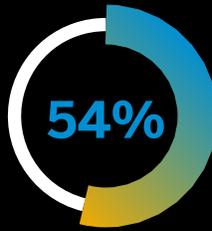

report annual costs of at least \$1.18 million due to supply chain disruption

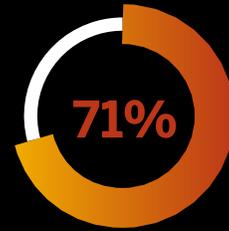

Now, organizations are starting to get prepared.

use emergency communications software in times of disruption

of retailers deploy incident management software

use notification system as part of incident response

Get up and running fast with simple deployment

How SAP People Connect 365 keeps you up and running

1

Automatic data import and mobile number validation

Validate mobile numbers to ensure data fidelity. Get visibility into imports and numbers failing validation. Update contact information.

2

Predefined business rules and customizable keyword creation

Manage, create, and define keywords and responses based on individuals' locations.

3

Continuous risk monitoring and status updates

Use a proprietary, regulated risk feed to monitor potential incidents around the world.

4

Easy group creation and management

Use the intuitive dashboard to create and associate events with specific locations. Assign individuals by custom parameters. Enable two-way messaging.

5

Dual-control, "four-eyes" messaging approval

Automate workflow based on two-factor authentication. Set thresholds for approval by a second authorized person.
